

Preventing Infection

Equipment Management

Improper Care of Protective Sports Equipment can Lead to a Serious Health Hazard...

When wet, sweaty equipment is stored in a bag, locker, trunk, etc., the result can be a warm, dark moist environment that is ideal for infectious bacteria such as MRSA to grow.

Please take the following precautions to help **prevent bacteria** from **growing** and causing that **awful smell**, while protecting your child and self...

- ✓ Rid equipment of excess water by wiping off and hanging it to dry as soon as possible following each use.
- ✓ Do not pack or store equipment until fully dry.
- ✓ Do not allow athletes to share equipment, unless cleaned between each use.
- ✓ Launder uniforms and undergarments after each use.
- ✓ Have equipment cleaned regularly with a process that eliminates bacteria such as MRSA.

**SoCal
Sani Sport
...be less offensive!**

**Sanitizing and Deodorizing
your equipment
Kills 97% of all infectious bacteria**
